Useful Snippets

HTACCESS

Quite often a server will display both root and www version of the website, using this code below will redirect the root version to the www version.

```
RewriteEngine on
RewriteCond %{HTTP_HOST} ^example\.com$
RewriteRule (.*) http://www.example.com/$1 [R=301,L]
```

When you code something using static HTML, you will notice the index.html appear. This code will redirect the index.html to /

```
RewriteEngine On
RewriteBase /
RewriteRule ^index\.html$ / [NC,R,L]
```

Suggestions?

If you want to see something here, then please FWD your suggestion to James at suggest@socon11.com and he will add them.
